HELLO! :)

Happy holidays too! :)

Oh, yeah.

Andru was made a proposal and he should take a decision. This decision is not easy, tell the truth. Additionally we have parliamentary elections in autumn next year, so it seems to be that this “project” will take at least 10 months. There are too many nuances and details, so it’s not easy at all. We visit the parents tomorrow and there we can discuss it in a calm atmosphere.

Regarding the vessel. We have already mailed about it. We should buy an existing vessel, even if it is in bad condition, and then either: 1) keep operating it, or 2) saw it for scrap and in its stead transfer the own vessel. There are no free kilowatts. Everything is allocated in kilowatts for each EU country and allocated. The free kilowatts appear only when you “decommission” your vessel. That's the mess we are in.

Regarding that vessel “Otto”. If I remember correctly, it doesn’t suit to you? Is it too big? Too expensive? Maybe we can “change places in a table”? To transfer this vessel into other flag? RU, f.example. And so to keep fishing? And in its stead transfer an other vessel, which is more modern? Here may you have combination.

Regarding the other alternatives. I can talk to the guys from the Ministry, which gave me information about “Otto”, maybe they have an eye to something else. Otherwise I do not really know where we can get such information from, this branch is too specific for me.

I you are going to go to Latvia – it will be super! Let know in advance. Maybe I will have two short travels for a few days to Minsk and to London.

Best regards! Hugs and kisses! :)

Nadia & Peter

Hello Piter!

Merry Christmas and Happy New Year!

Yesterday we flew to Hawaii, it's very good here even during Christmas!

I follow the news from Katvia, I don't want to disturb Andron, you should be careful with such proposals. As far as I understood he is going to reject it. Anyway I think that he should know better.

I want to keep searching opportunities for purchase of either vessel/company in Latvia, or transfer a new vessel into free kilowatts. People I know could do it in Lithuania.

Keep this issue under control. After 15th – 20th of January I'm going to go to Europe, I hope I'll visit Riga. Just for fun, and in relation to this case.

Best regards, say to Andron I'm watching him

Bye,
Kir
